## **INNER JOIN**

# Практика к уроку

Таблица city\_customers\_suppliers — справочник городов для таблицы skill\_customers\_suppliers. Связь данных осуществляется через общее поле city\_id

- 1. Напишите SQL-запрос с INNER JOIN, объединяющий обе таблицы
- 2. Добавьте к запросу ещё одну таблицу-справочник **gender**, свяжите таблицы **city\_customers\_suppliers** и **gender** по полю **gender\_id**, которое присутствует в обеих таблицах
- 3. Модернизируйте запрос, связывающий три таблицы, так, чтобы в результирующей выборке остались только поля **name, city** и **gender**
